Professional Experience |

Nike / SNKRS App | Mobile Test Engineer | Nov 2018 – July 2020

Project Overview | *Elevating sneakers fan communities and shopping experiences to the digital world.*

- Served as a key contributor by creating innovative stories feature from scratch to showcase sneaker culture to users.
- Oversaw and managed regressions, test cases, and project plans while adhering to monthly deadlines.
- Used Android Studios and Xcode extensively for builds and debugging.
- Evaluated client-server issues in mobile by using Charles Proxy to facilitate timely resolutions.
- Developed a deep understanding of content authoring, content management technologies, along with multi-lingual content strategies and localization.
- Completed API endpoint testing with Insomnia.

Apple | Test Engineer | Aug 2018 – Oct 2018

Project Overview | *Worked on new specs for the iPhone XS, XS Max, XR and Watch series 4 on a three month project.*

- Executed manual testing to ensure optimal product functionality.
- Ensured proper layout in alignment with specific devices and specs through GUI Testing.
- Reports and logged all identified defects with various Apple internal bug-tracking tools.
- Ran tests on multiple devices using XCode Simulator.

CBS Interactive | Mobile Test Engineer | July 2017 - Aug 2018

Project Overview | *Project lead for an upcoming Netflix copy-cat feature to the CBS app, created high quality test cases using very little documents and stories.*

- Tested Mobile API services using Charles Proxy.
- Executed test scripts and test suites with Selenium.
- Designed, developed, and executed test cases and identified any pre-production errors or issues.
- Extensively used test management tools like TestRail and JIRA to develop test cases, test scripts, executing the scripts and tracking the defects, logging the defects and reporting the defects.
- Tested on multiple streaming devices iOS, Android, ROKU, XBOX, Playstation to replicate similar functionalities as Netflix.

Home Box Office (HBO) | Software Test Engineer | Oct 2015 - Jul 2017

Project Overview | *Multi-Tenant Identity and Access Management Interface (M.I.A.M.I) aims to create a new and consolidated internal login experience by creating a one-time sign-in centralized authentication server for all systems and apps.*

- Authored and executed Automated Testing Scripts using Tosca.
- Worked collaboratively with both in-house and offshore teams to drive productivity and efficiency.
- Completed in-mobile, both iOS and Android, platform testing under numerous scenarios involving battery strength, incoming calls, carrier networks, and various internet speeds.
